

FSG Announces Vice President of Construction **James Klassen – Southern California**

"I am honored to be joining the FSG family as it looks to expand its Electrical Construction business in Southern California. I chose to make FSG my new home because they hold to the same values that I do; that a company needs to serve its clients, its employees, and all the stakeholders with whom it does business."

– James Klassen

In continuing to build upon the Institution, FSG announces the addition of James Klassen, FSG Southern California's newest VP of Construction. James will be spearheading the Southern California construction operation, reporting to Mark Mitchell, FSG's COO of Construction.

James steps into this role with over 25 years of industry experience, primarily in the California region. He has a proven track record of running successful construction operations, most recently serving as VP of Operations for Cupertino Electric in Southern California. James has a talent for correcting practices and systemic behaviors that detract from the success of the business to refocus the operation on its customers and its employees.

With his vast knowledge of the industry, creative problem-solving skills, and his personable attitude, FSG is ecstatic to welcome James to the team. He says, "I chose to make FSG my new home because they hold the same values I do; a company needs to serve its clients, its employees, and all the stakeholders with whom it does business. I have learned over my 25 years in this industry that it is much better to do business with friends and I'm looking forward to working with my old friends as well as making new ones."

Join us in taking a moment to congratulate James on his new position and welcome him to FSG! We are elated to have you and see your vision for Southern California come to life.
